Project Title: Project Name						Author	Date	0																																																																																																
Subject/Feature: Wind reference pressure calculation - Eurocode 1 (EN 1991-1-4)						Checked By	Date																																																																																																	
						Checker	Date																																																																																																	
$q_p(z) = c_e(z) * q_b$ Air density $\rho = 1.25 \text{ kg/m}^3$						per EN 1991-1-4 Section 4.5 (1) Expression (4.8) The National Annex may give other rules for the determination of $q_p(z)$. per EN 1991-1-4 Section 4.5 Note 2 - Recommended value is 1.25 Other values may be specified by the National Annex																																																																																																		
Fundamental value of the basic wind velocity $v_{b,0} = 30 \text{ m/sec}$						Value specified in the National Annex																																																																																																		
Basic wind velocity calculation $c_{dir} = 1$ directional factor $c_{season} = 1$ season factor $v_b = c_{dir} * c_{season} * v_{b,0} = 30 \text{ m/sec}$						per EN 1991-1-4 Section 4.2 Note 2 - Recommended value is 1.0 Other values may be specified by the National Annex per EN 1991-1-4 Section 4.2 Note 3 - Recommended value is 1.0 Other values may be specified by the National Annex per EN 1991-1-4 Section 4.2 (1)P Expression (4.1)																																																																																																		
Basic velocity pressure $q_b = 1/2 * \rho * v_b^2 = 562.5 \text{ N / m}^2$						per EN 1991-1-4 - Section 4.5 (1) Expression (4.10)																																																																																																		
Terrain category: III $\Rightarrow z_0 = 0.3 \text{ m}$; $z_{min} = 5 \text{ m}$						per EN 1991-1-4 - Table 4.1 roughness lengths																																																																																																		
Terrain roughness: $c_r(z) = k_r * \ln(z/z_0)$ for $z_{min} < z < z_{max}$ $c_r(z) = c_r(z_{min})$ for $z < z_{min}$ $z_{0,II} = 0.05 \text{ m}$ $z_{max} = 200 \text{ m}$ $k_r = 0.19 * (z_0/z_{0,II})^{0.07} = 0.2154$						per EN 1991-1-4 Section 4.3.2 per EN 1991-1-4 Section 4.3.2 (1) Expression (4.4) per EN 1991-1-4 Section 4.3.2 Expression (4.5) - roughness length for terrain cat. II per EN 1991-1-4 Section 4.3.2 Expression (4.5) - max. roughness length to be taken as 200m per EN 1991-1-4 Section 4.3.2 Expression (4.5) terrain factor depending on z_0																																																																																																		
Terrain orography: $c_o(z) = 1$						per EN 1991-1-4 Section 4.3.1 Note 1 for flat terrain $c_o(z) = 1.0$ for other types of terrain see section 4.3.3 & Annex A.3																																																																																																		
Wind turbulence $k_l = 1$ - turbulence factor; $I_v(z) = k_l / (c_o(z) * \ln(z/z_0))$ for $z_{min} < z < z_{max}$ $I_v(z) = I_v(z_{min})$ for $z < z_{min}$						per EN 1991-1-4 Section 4.4 (1) recommended value is 1.0, other values may be specified by the National Annex per EN 1991-1-4 Section 4.4 (1) Expression (4.7)																																																																																																		
Mean wind velocity $v_m(z) = c_r(z) * c_o(z) * v_b$						per EN 1991-1-4 Section 4.4 (1) Expression (4.7)																																																																																																		
Peak velocity pressure $q_p(z) = c_e(z) * q_b$ where $c_e(z) = [1 + 7 * I_v(z)] * c_r(z) * c_o(z)$						per EN 1991-1-4 Section 4.4 (1) Expression (4.7)
